

# Things to do:

- Finish number type case checking in command
- String types/string operations
- String reversal
- Ensure type safety
- Call function macro semantics
- Error implementation
- 2 good program examples and 3 bad examples
- 

Brenden:

- ✓ Number type case checking in command
- ❑ Define/Call function macro semantics

Bryce:

- ✓ Error implementation
- ✓ Type safety
- ✓ While looping

Sheldon:

- ✓ String operations/reversals
- ✓ Good/Bad examples

April:

- ✓ Number type case checking in command
- ❑ Define/Call function macro semantics

Extra Time/Fun Stuff:

- ✓ Pretty print for output. Ex: (Num (Int 4)) -> 4; Error TypeError (String "Error") -> TypeError Exception: "Error"; ect...
- ✓ Simplifying Cmd with numericalEvaluation and other similar patterns
